

Create Resource Sharing Plans

Resource Sharing Plan

If your proposed research is subject to the [Model Organism Sharing Policy](#), the [Research Tools Policy](#), and/or requires software sharing, create a unified Resource Sharing Plan to share these resources. You will attach the plan as a PDF to the Resource Sharing Plans field of the PHS 398 Research Plan Form, PHS 398 Career Development Supplemental Form, or PHS Fellowship Supplemental Form. This does not count toward your Research Strategy page limit.

If your proposed research will create a new model organism, you must submit a Resource Sharing Plan. The content and level of detail in a sharing plan depends on several factors, such as the status of the development of a model organism, the method of sharing, and the potential impact of intellectual property rights on the available animal model.

Include a justification if you are not providing a plan for an organism that would normally require sharing. Add information to other sections of the application as appropriate. You may also need to respond to notice of funding opportunity-specific resource sharing requirements outlined in the specific funding opportunity (e.g., software sharing).

Check NIH's [Sample Research Sharing Plans](#) and the following NIAID examples:

- [Complex Model Organisms Sharing Plan](#)
- [Simple Model Organisms Sharing Plan](#)
- [Model Organisms Sharing Plan for Mice](#)

Find additional details in the [Other Sharing Policies](#) section of NIH's [Scientific](#)

Data Sharing [🔗](#) website.
